## Why AvanTech YOU?

The AvanTech YOU drawer system helps you achieve what your customer wants. Easy to install and with options to retrofit into existing spaces, AvanTech YOU also has the biggest scope for customised design.

**Slim design:** a sleek 13 mm drawer side profile and more accessories for customisation.

**Optimised drawer performance:** one drawer, two runners. Interchangeable due to compatible drilling patterns and with Hettich's unmatched Push to Open and Silent System close technology.

**Efficient and cost effective production:** production and assembly processes guarantee cost effectiveness and efficient work flows while at the same time providing the basis for a broad product lineup.

**Design diversity and creative flexibility:** different shapes, colours and materials for design continuity inside and out.

**Many options for customisation:** additional design profiles and DesignCapes.

**Function and form:** looks good, performs too. High quality runners and strong underlying technology for a robust and durable draw.

### AvanTech YOU is for changing design possibilities

The AvanTech YOU drawer system provides a huge amount of design flexibility in terms of colour, shape and material.

Design profiles or DesignCapes are installed with an easy click for a customised accent. AvanTech YOU Inlay, the elegant drawer side profile with the inlay of your choice, offers alternative, impactful design choices.

Printing your logo on the drawer side profile is a signature on a great creation.

With the option of using any chosen materials, your living space stands apart.

## ► AvanTech YOU Runners

### **One drawer, two runners**

One drawer system, two runner options. An identical drilling pattern makes it possible to meet a much broader range of requirements using a single system.

The runner is the basis for superior performance, as a smooth, durable function is the most valuable, heavily utilised element of a premium drawer.

Both AvanTech YOU runner options can also be applied to wooden drawers.

### Quality that meets all the demands

The quality of the drawer systems is monitored continuously. Hettich fittings comply with the national and international quality standards of the markets our customers operate in. The diagrams below show some of the tests Hettich fittings are required to pass.

#### Application area

Hettich drawer systems are suitable for use in living room, kitchen, bathroom and office furniture both in the home and business environment.

#### Load capacity and guards preventing unintentional detachment / removal

The load capacity indicated (to DIN EN 15338) is understood to mean the weight of the drawer itself, including contents, in kg. The applicable level is shown on the product. The load capacity refers to a reference length of 500 mm. The load capacity may vary for other

nominal lengths. All Hettich drawer systems feature guards to prevent the drawer from rolling out and being removed unintentionally and meet the requirements of the impact test in a test frame to EN 15338. Fitted in the proper manner, the drawer systems are suitable for furniture defined in EN 14749. The maximum front panel height depends in particular on the material, drawer size and drawer runner. Testing is conducted on drawers with a 130 mm front panel height and pot-and-pan drawers with a 300 mm front panel height. We will be pleased to provide any further information you may require.

#### Corrosion test

Hettich runner systems satisfy the requirements on corrosion defined in DIN EN 15338, 72 hour condensation water test to DIN EN 6270.

### Wear test

The fully laden drawer must remain in proper working order after opening and closing it for a defined number of times at a defined test velocity.

### Retention-on-opening test

The fully laden drawer is abruptly opened all the way several times at a defined test velocity.

### Horizontal load test

Opened all the way, the fully laden drawer is additionally exposed to horizontal strain from a defined lateral force.

### Vertical strain test

Opened all the way, the drawer is additionally exposed to vertical strain from a defined eccentric force.

## Technical information & legal notice

### General technical conditions

The fitting information, screw fixing points and load capacity information contained in this document assume proper attachment using screws specified by Hettich to a chipboard panel providing a screw pull out resistance of at least 1,000 N in accordance with EN 320.

Hettich accepts no responsibility for the load capacity of furniture and its components if materials or fastening methods are used other than those stated; the furniture manufacturer must verify load capacity.

The fitting situations show in this catalogue are only intended to illustrate the possible options. The furniture manufacturer is responsible for ensuring that furniture is designed in compliance with standards, in particular with regard to meeting the requirements on safety.

We will be pleased to provide any further information you may require.
